

Complete Canine Flea & Tick Prevention

The Goal of Prevention:

*With tick disease on the rise in Wisconsin (and nationally); year-round broad-spectrum parasite control with efficacy against fleas and ticks is very important.

*Quick kill before any time to feed is most desirable to prevent disease transmission

*Some parasites have zoonotic potential and can be transmitted to humans.

<i>Comparison of the safe & effective products recommended by WTV</i>								Ticks Killed				Tick Diseases
